

Electro hydraulic orange-peel grab

- Exclusive electro-hydraulic system
- Indipendent removable electrohydraulic control unit
- Indipendent electrohydraulic control unit that works even disconnected from the bucket
- Oil filtration until 3 microns, the standard filtrations are approximately 60 microns
- Option of replacing the shells with different sizes and shapes

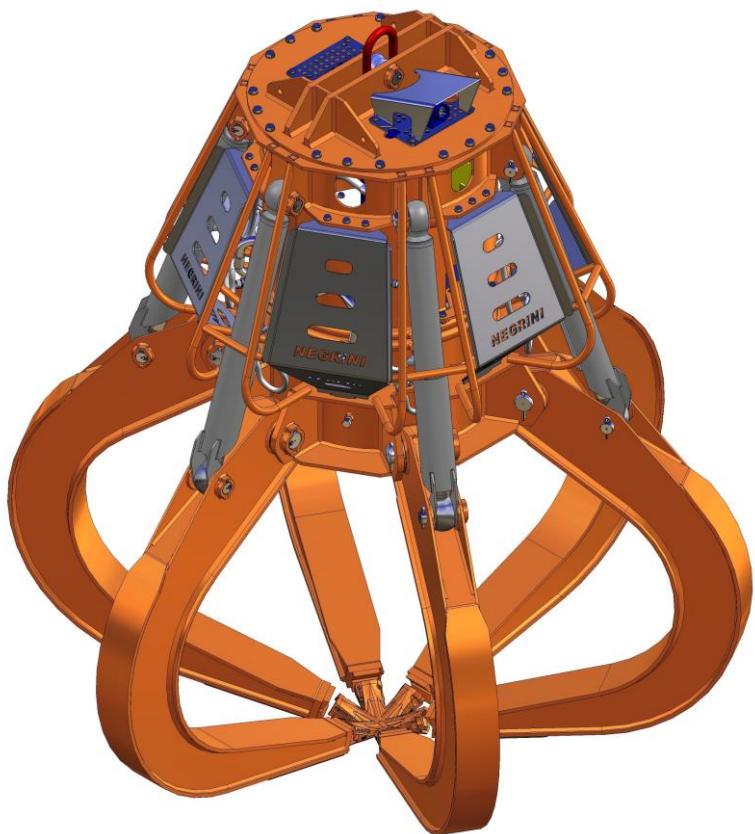

Standard shells model
SC= shells closed

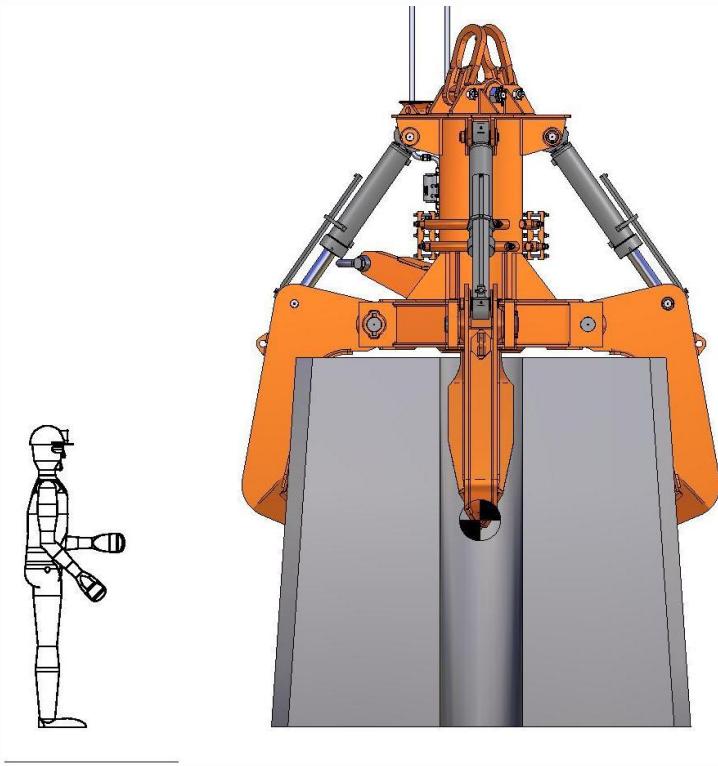

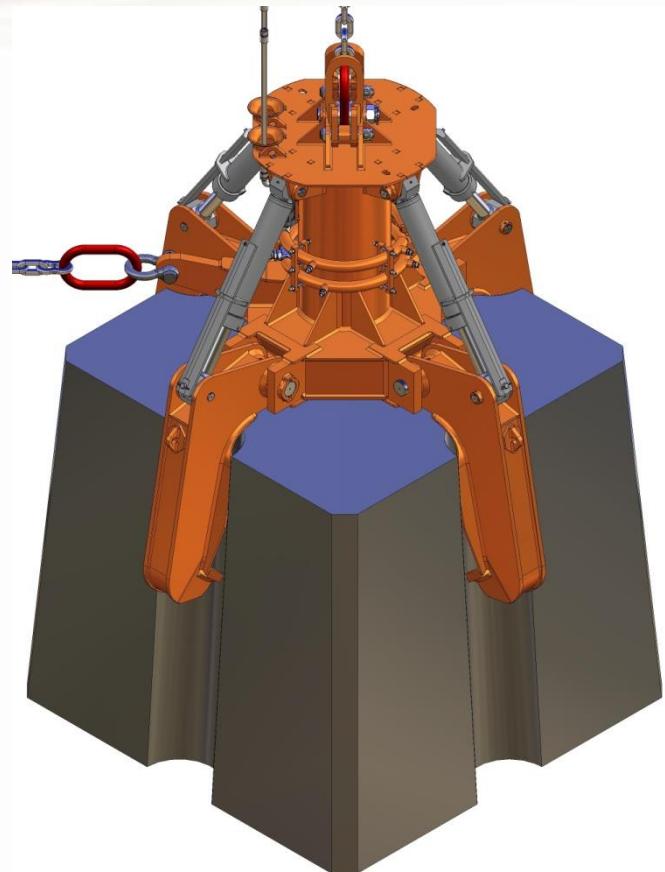

Half open shells model (with or without interchangeable teeth)
SH= shells half open

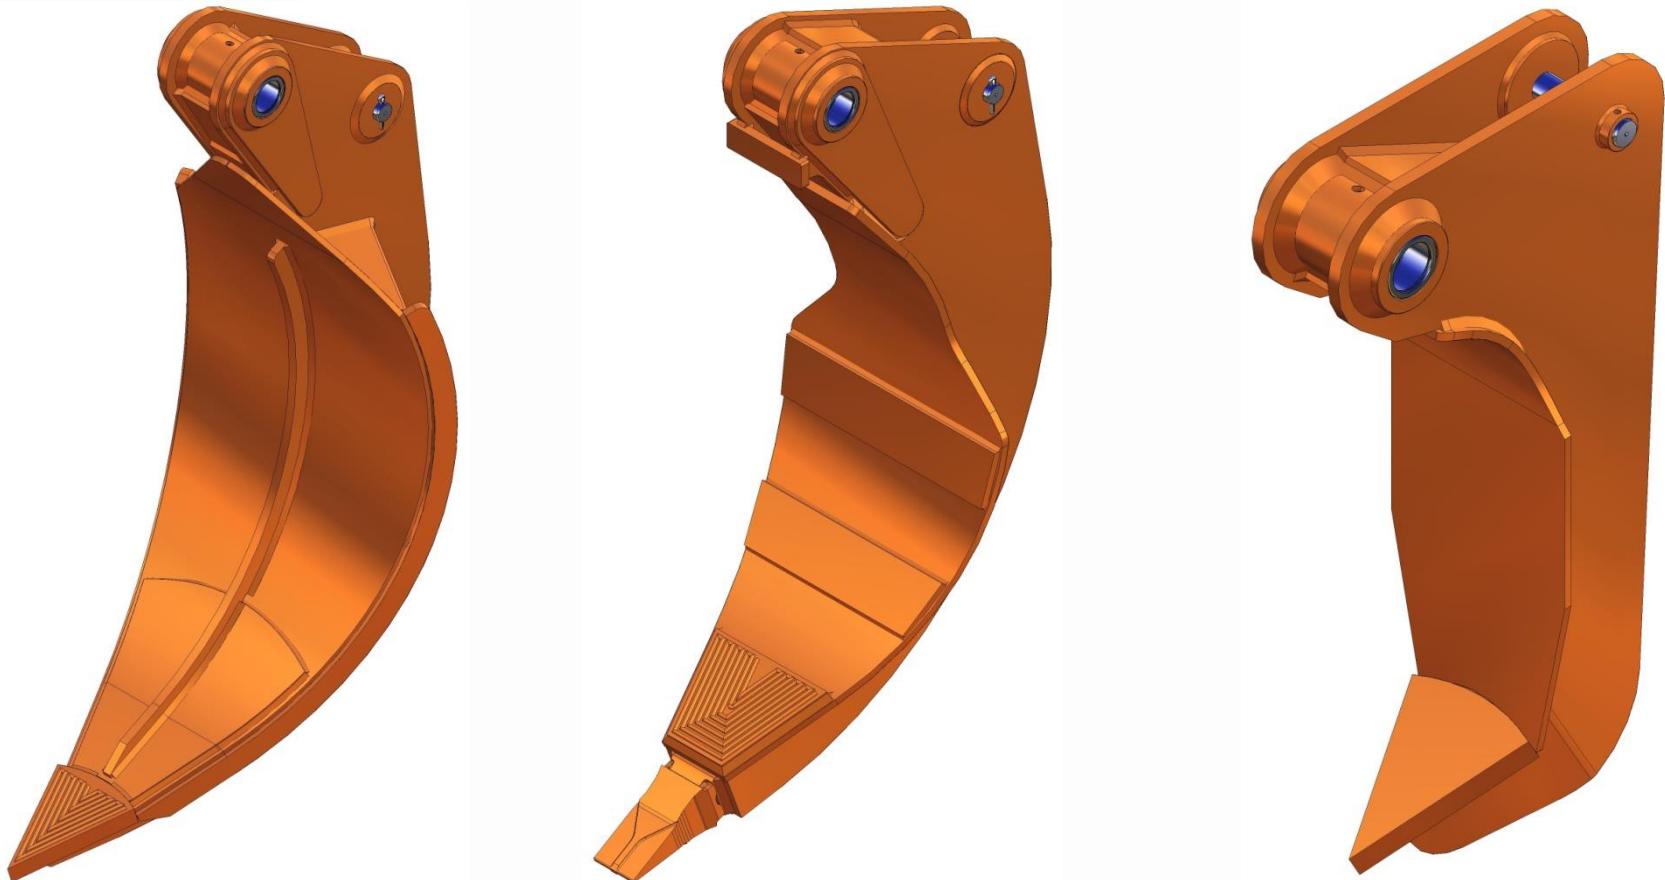

Open shells model (with or without interchangeable teeth)
SH= shells open

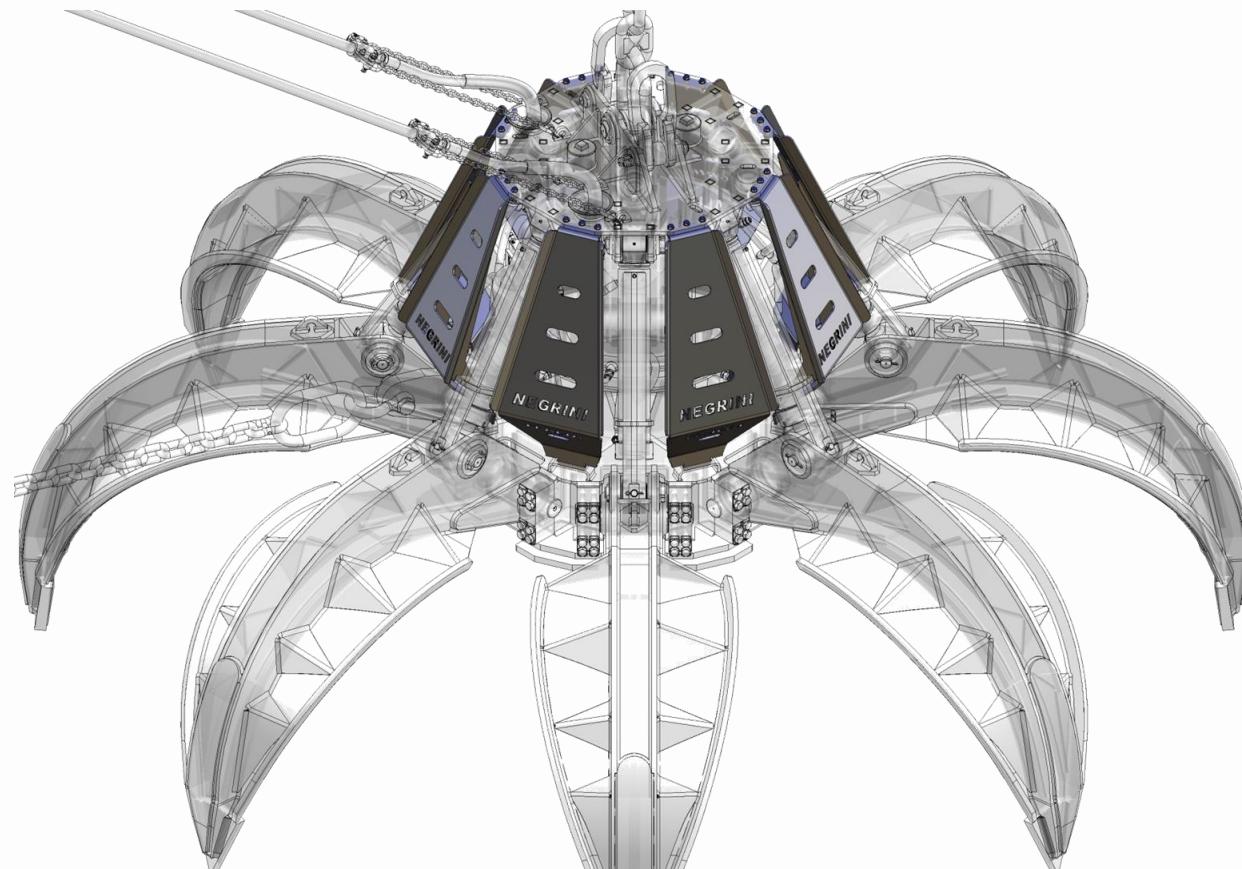

Special shells model with the form requested by the customer
(example)

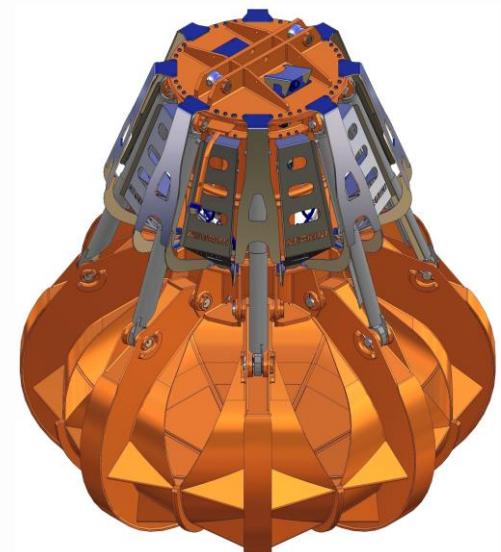

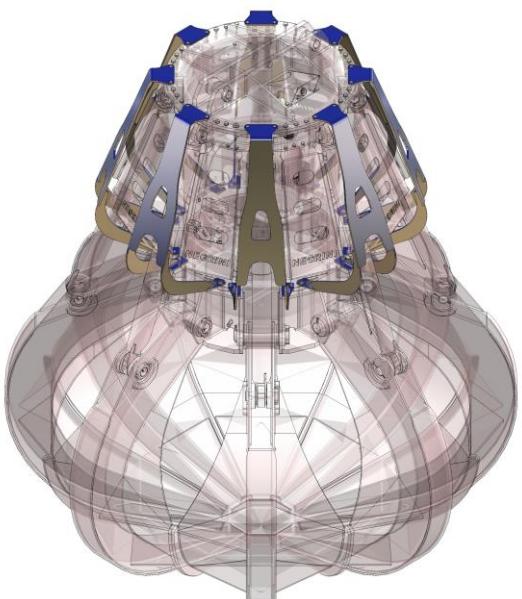

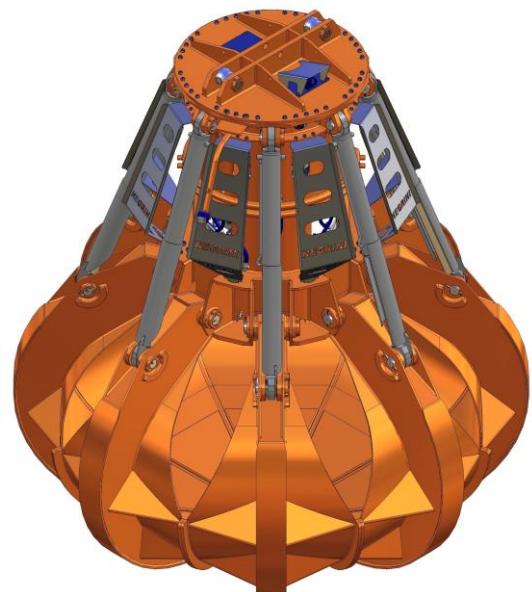

The grab can operate with shells of different shapes and characteristics, ranging through standard models with welded teeth protected with surface hardening, replaceable teeth, and personalized shell shapes.

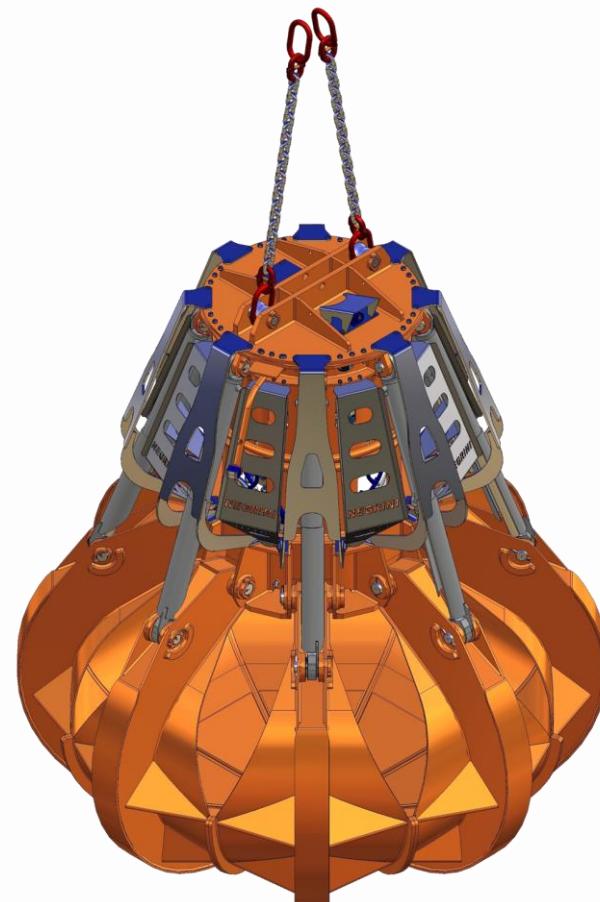

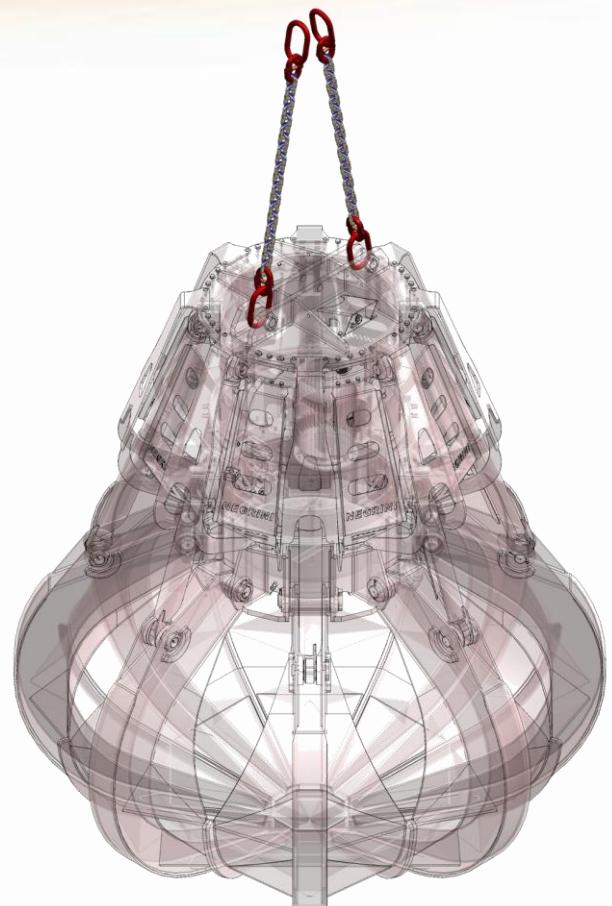

The hydraulic system is protected with heavy duty guards, which are fixed using standard screws available from specialized retailers.

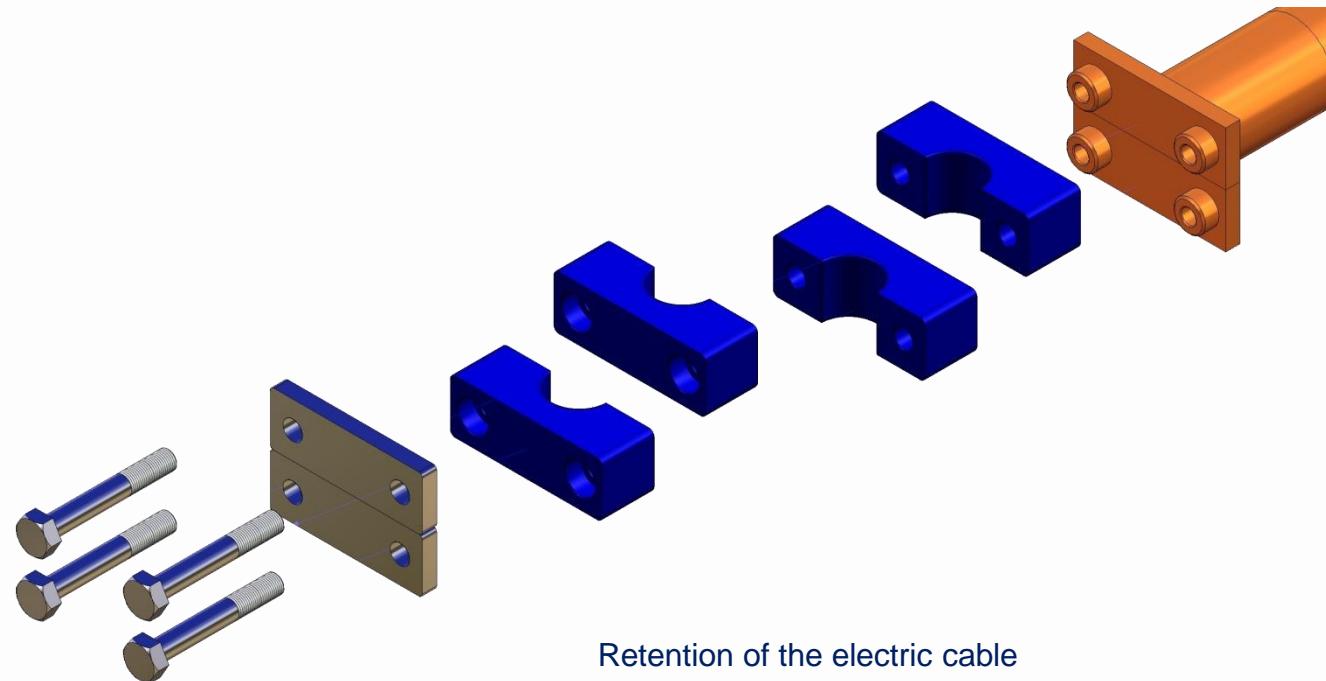

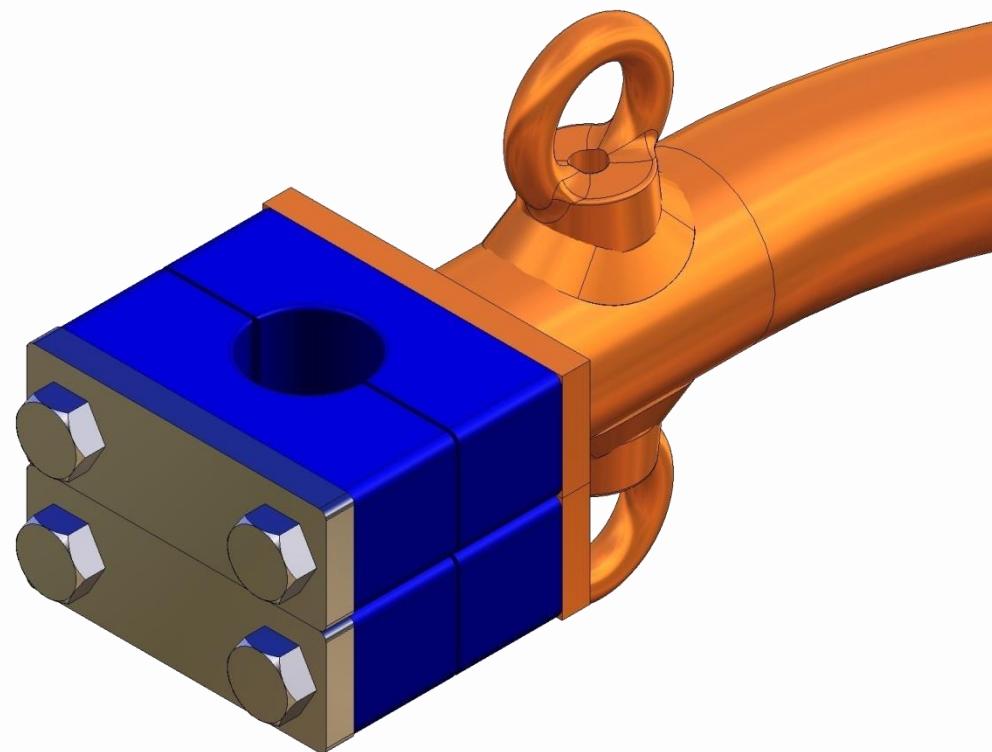

Piston protection
(optional)

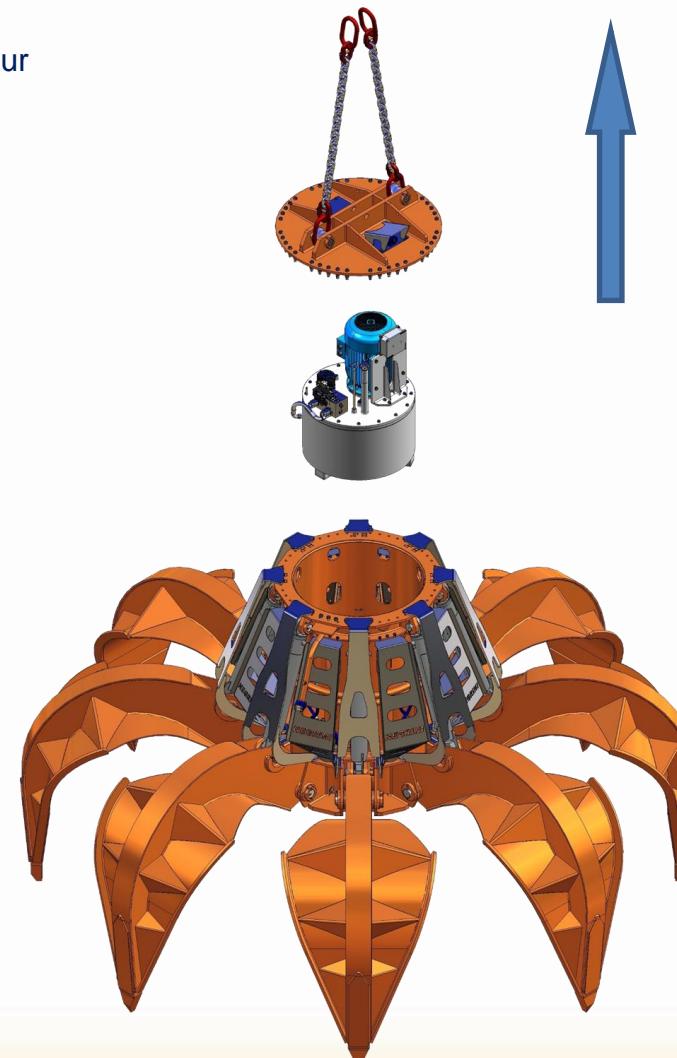

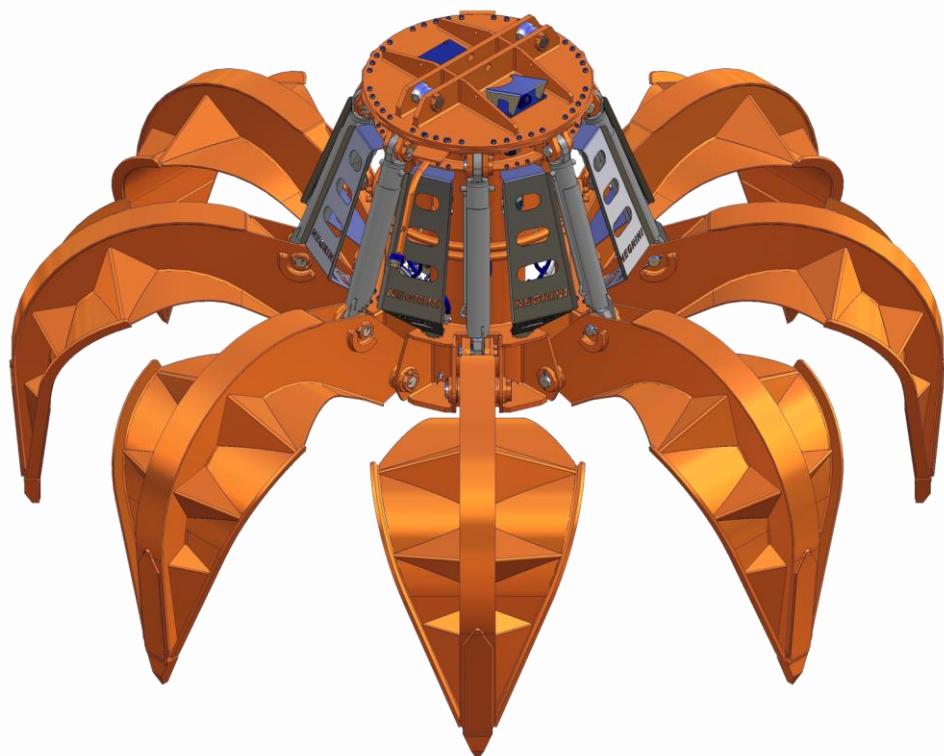

Lifting chains
(optional)

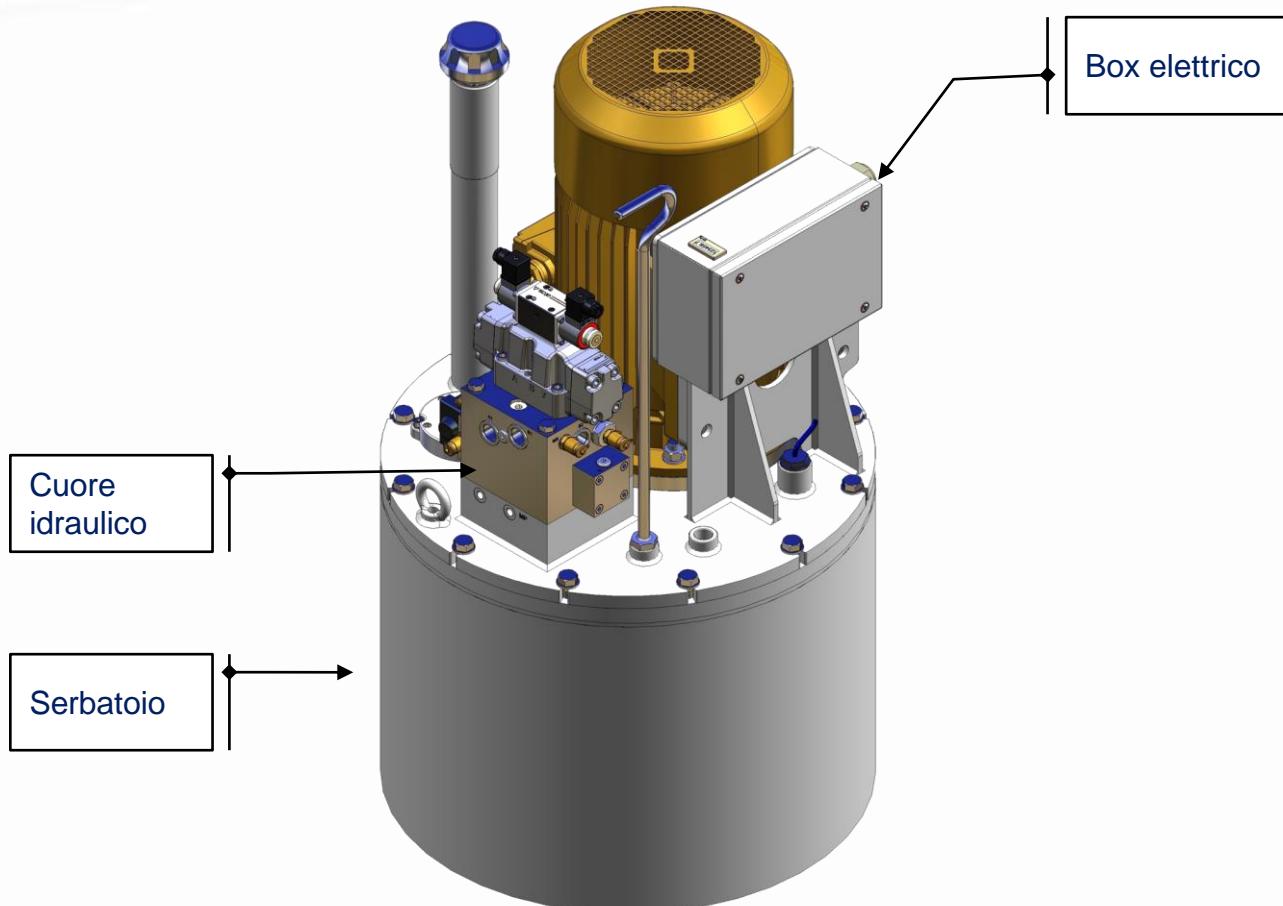

Retention of the electric cable

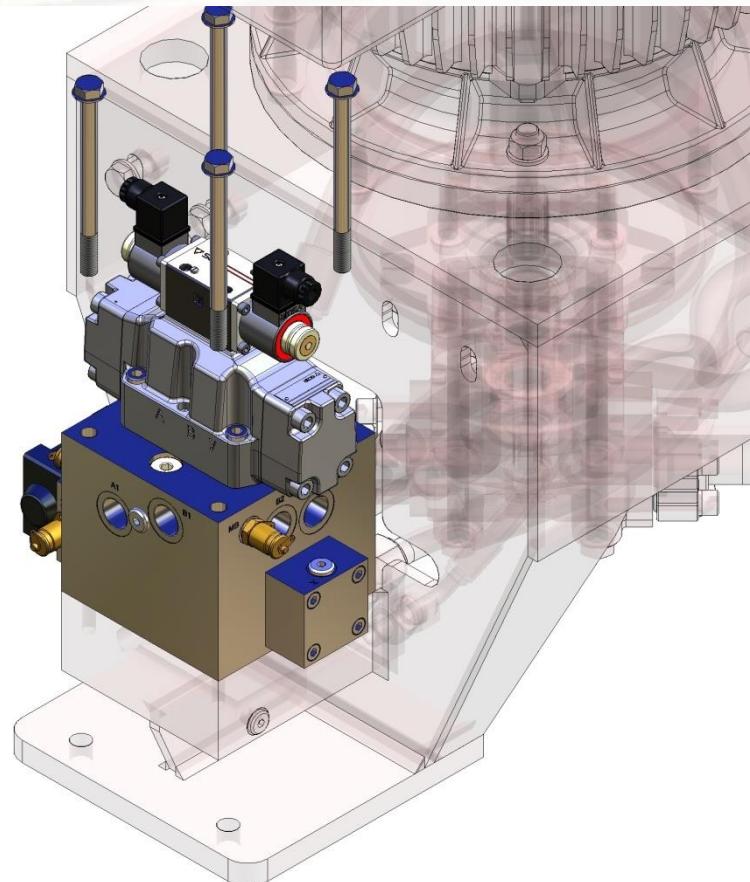

Full tank panel can be removed in about 3 hour

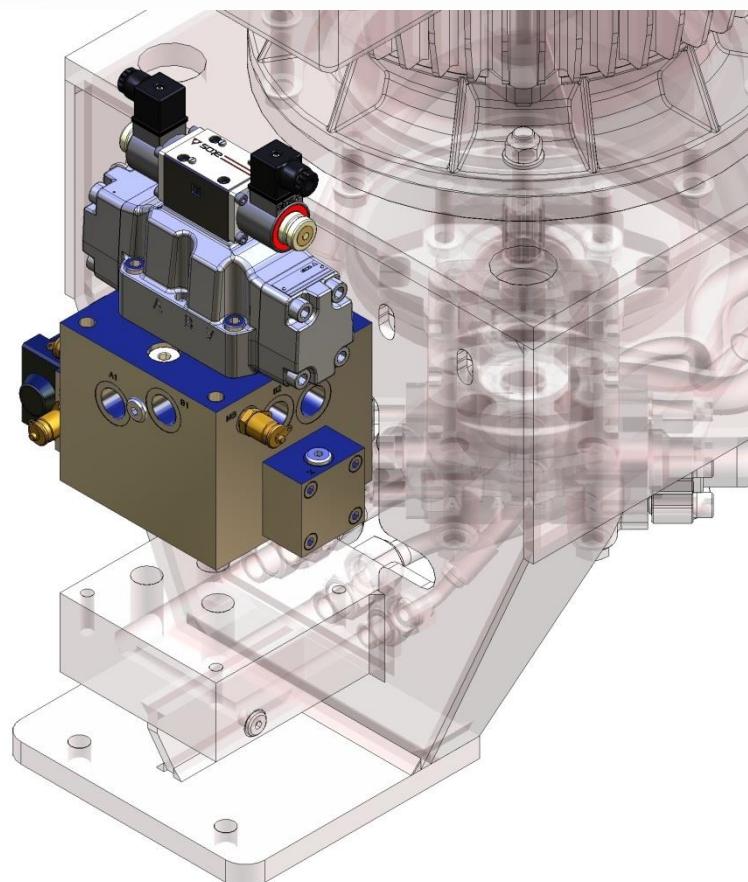

The bucket can be fitted with standard hydraulic box (with solenoid valves) or by reversing the motor, in this case the reversal rotation of the engine allows the opening or closing of the grab. In both the system the oil filtration can be happen until 3 microns (standard are of 60 microns). The versatility of the project will allow the bucket to install different box with different power from the standard, in many cases the box will be replaced by the user

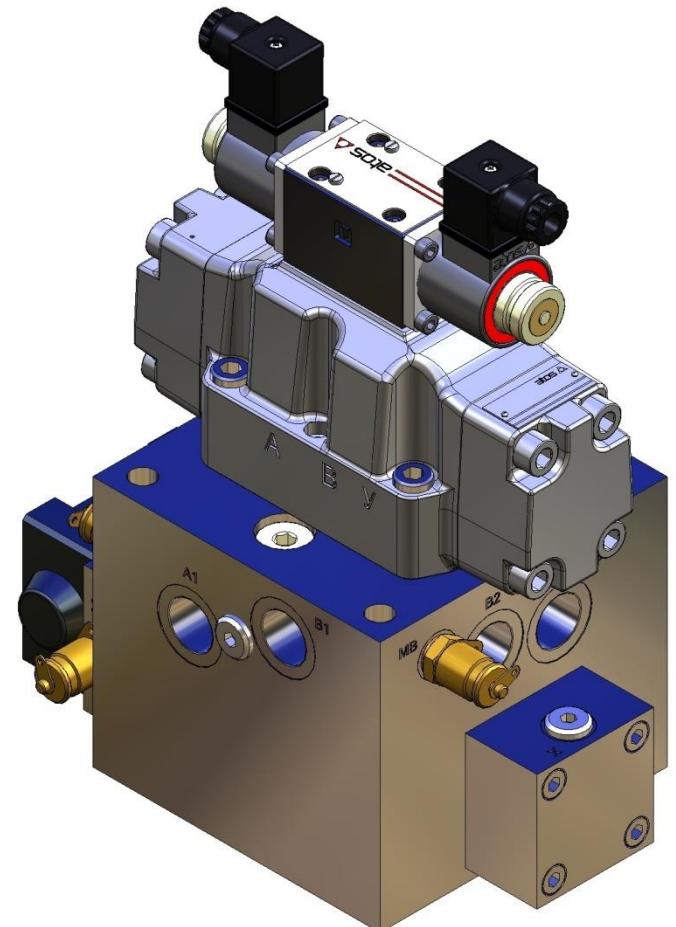

We put in a single metal block the heart of the hydraulic unit, simply by removing 4 screws is possible to replace the valves group. The operation is executable even from staff no particularly expert. Oil filtration until 3 microns (the normal filtrations are of 60 microns)
